Condor High Availability

SCHEDD

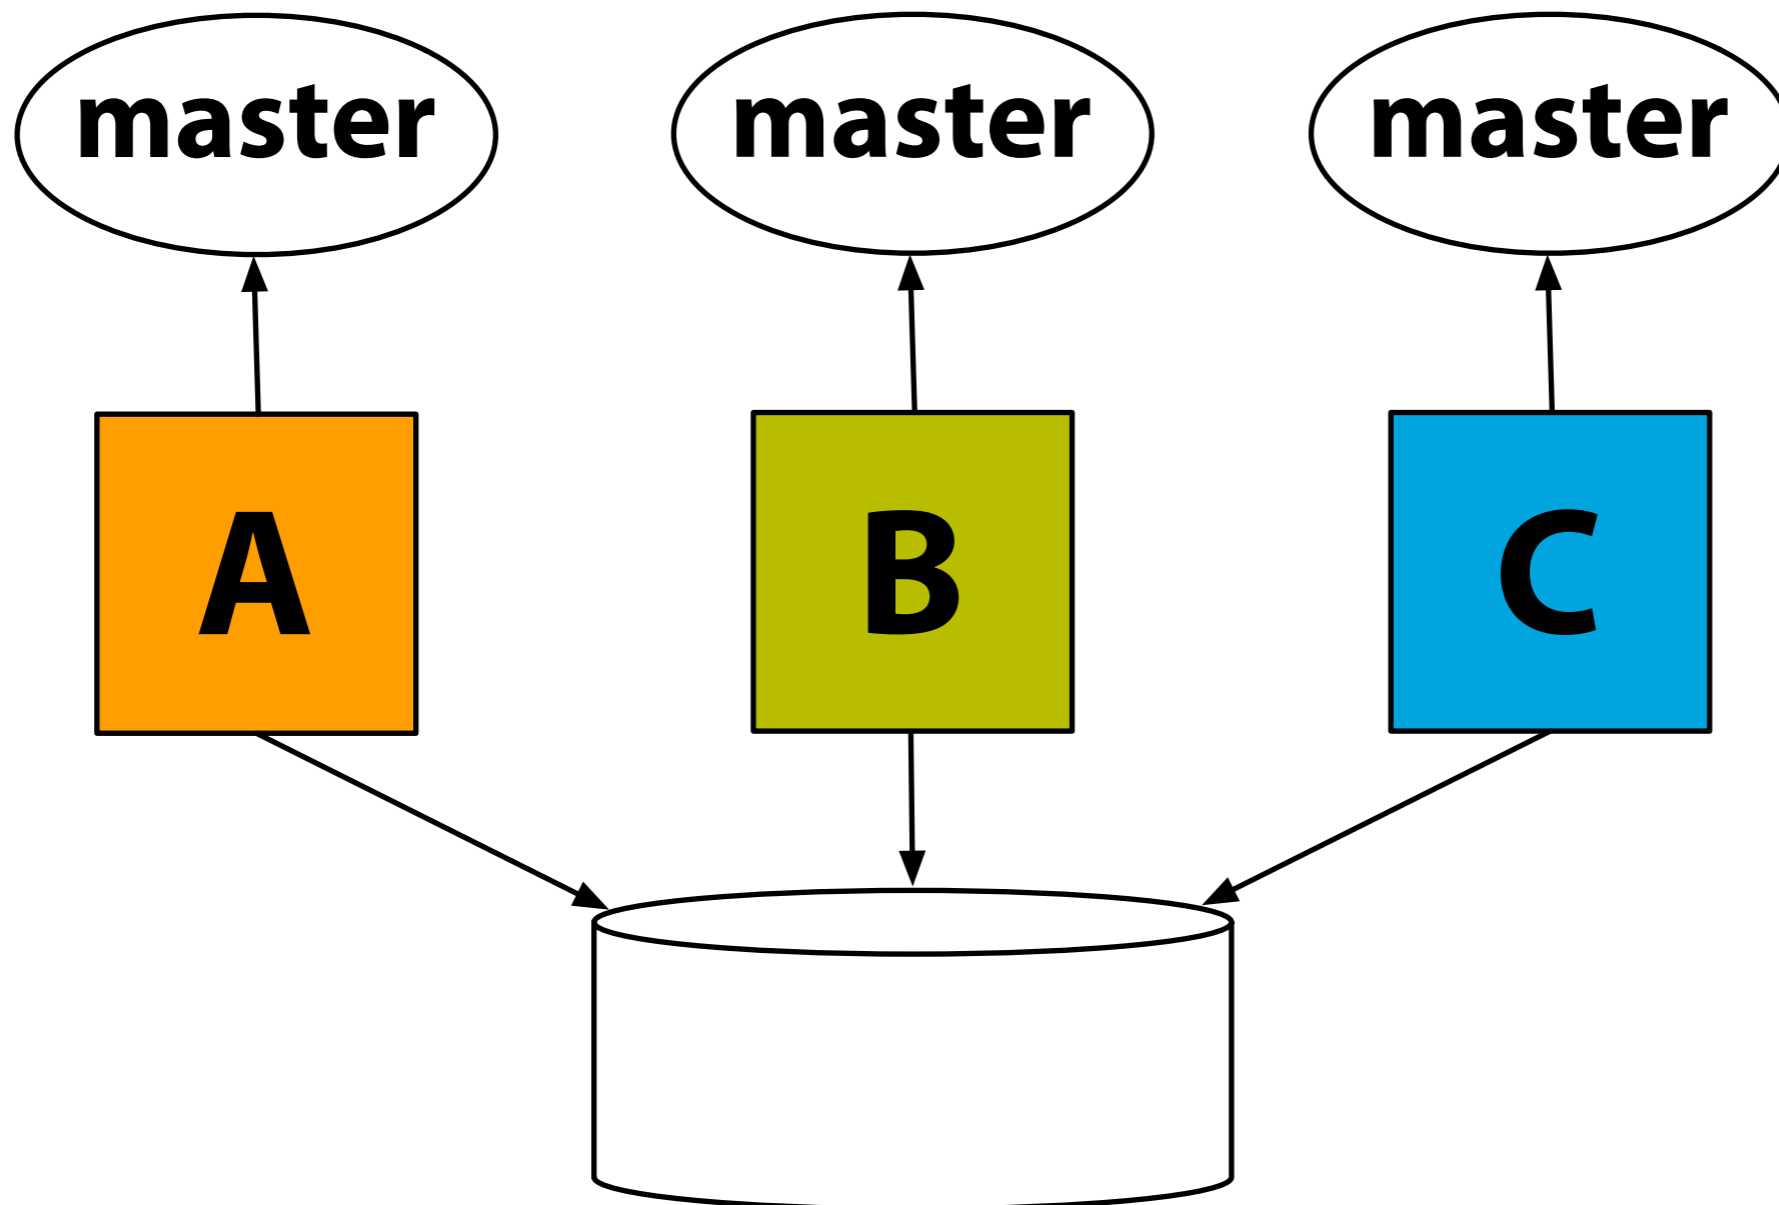

William C. Benton and Robert H. Rati
Red Hat, Inc.

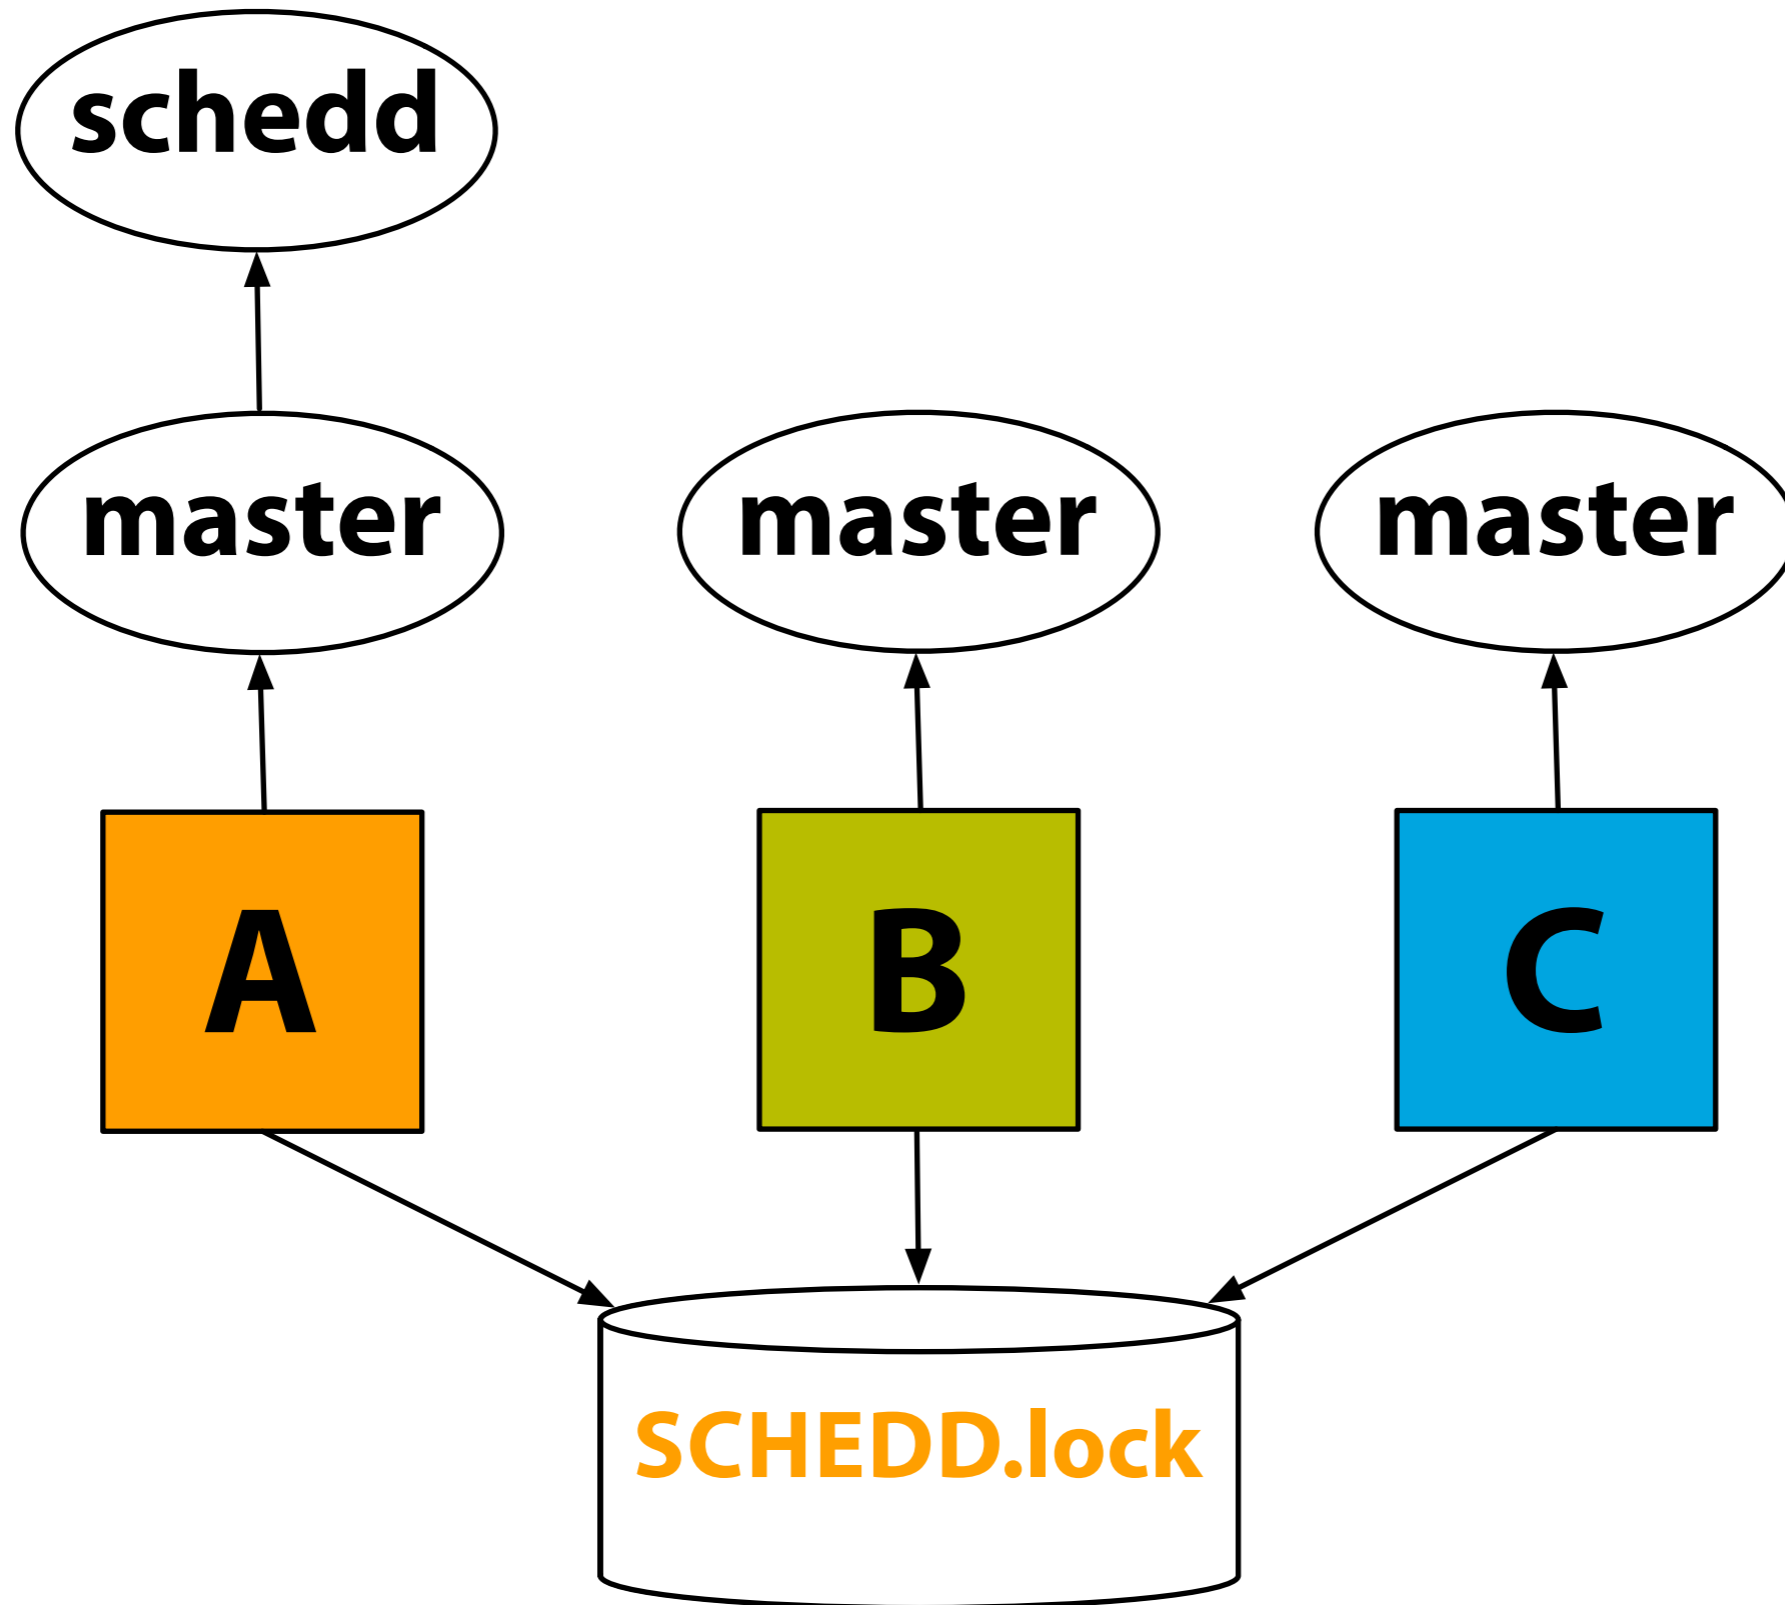

Forecast

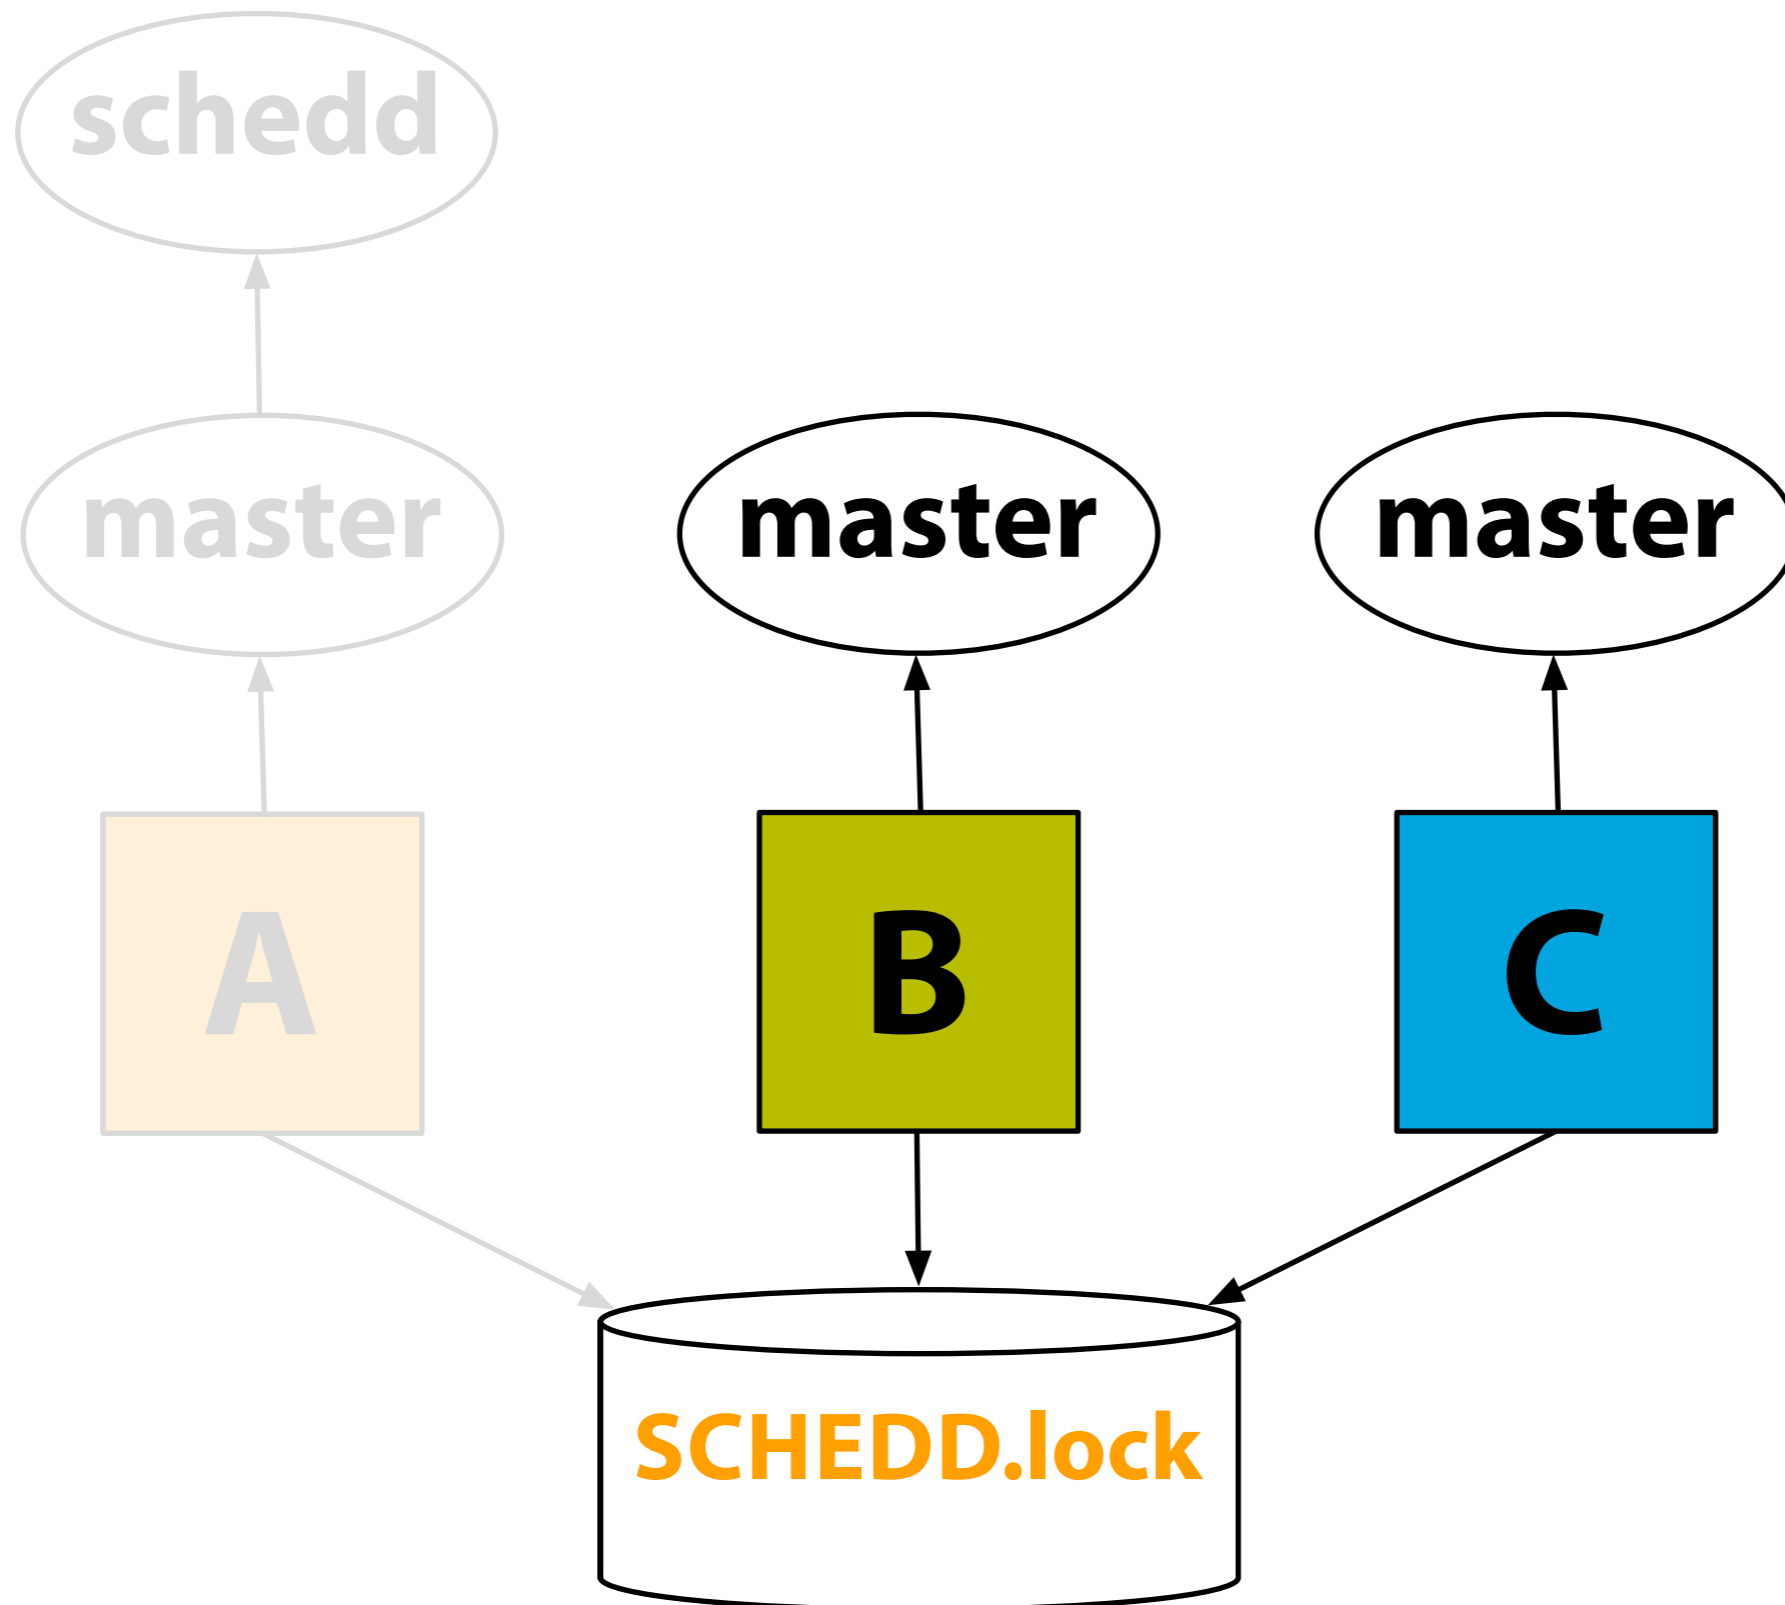

Forecast

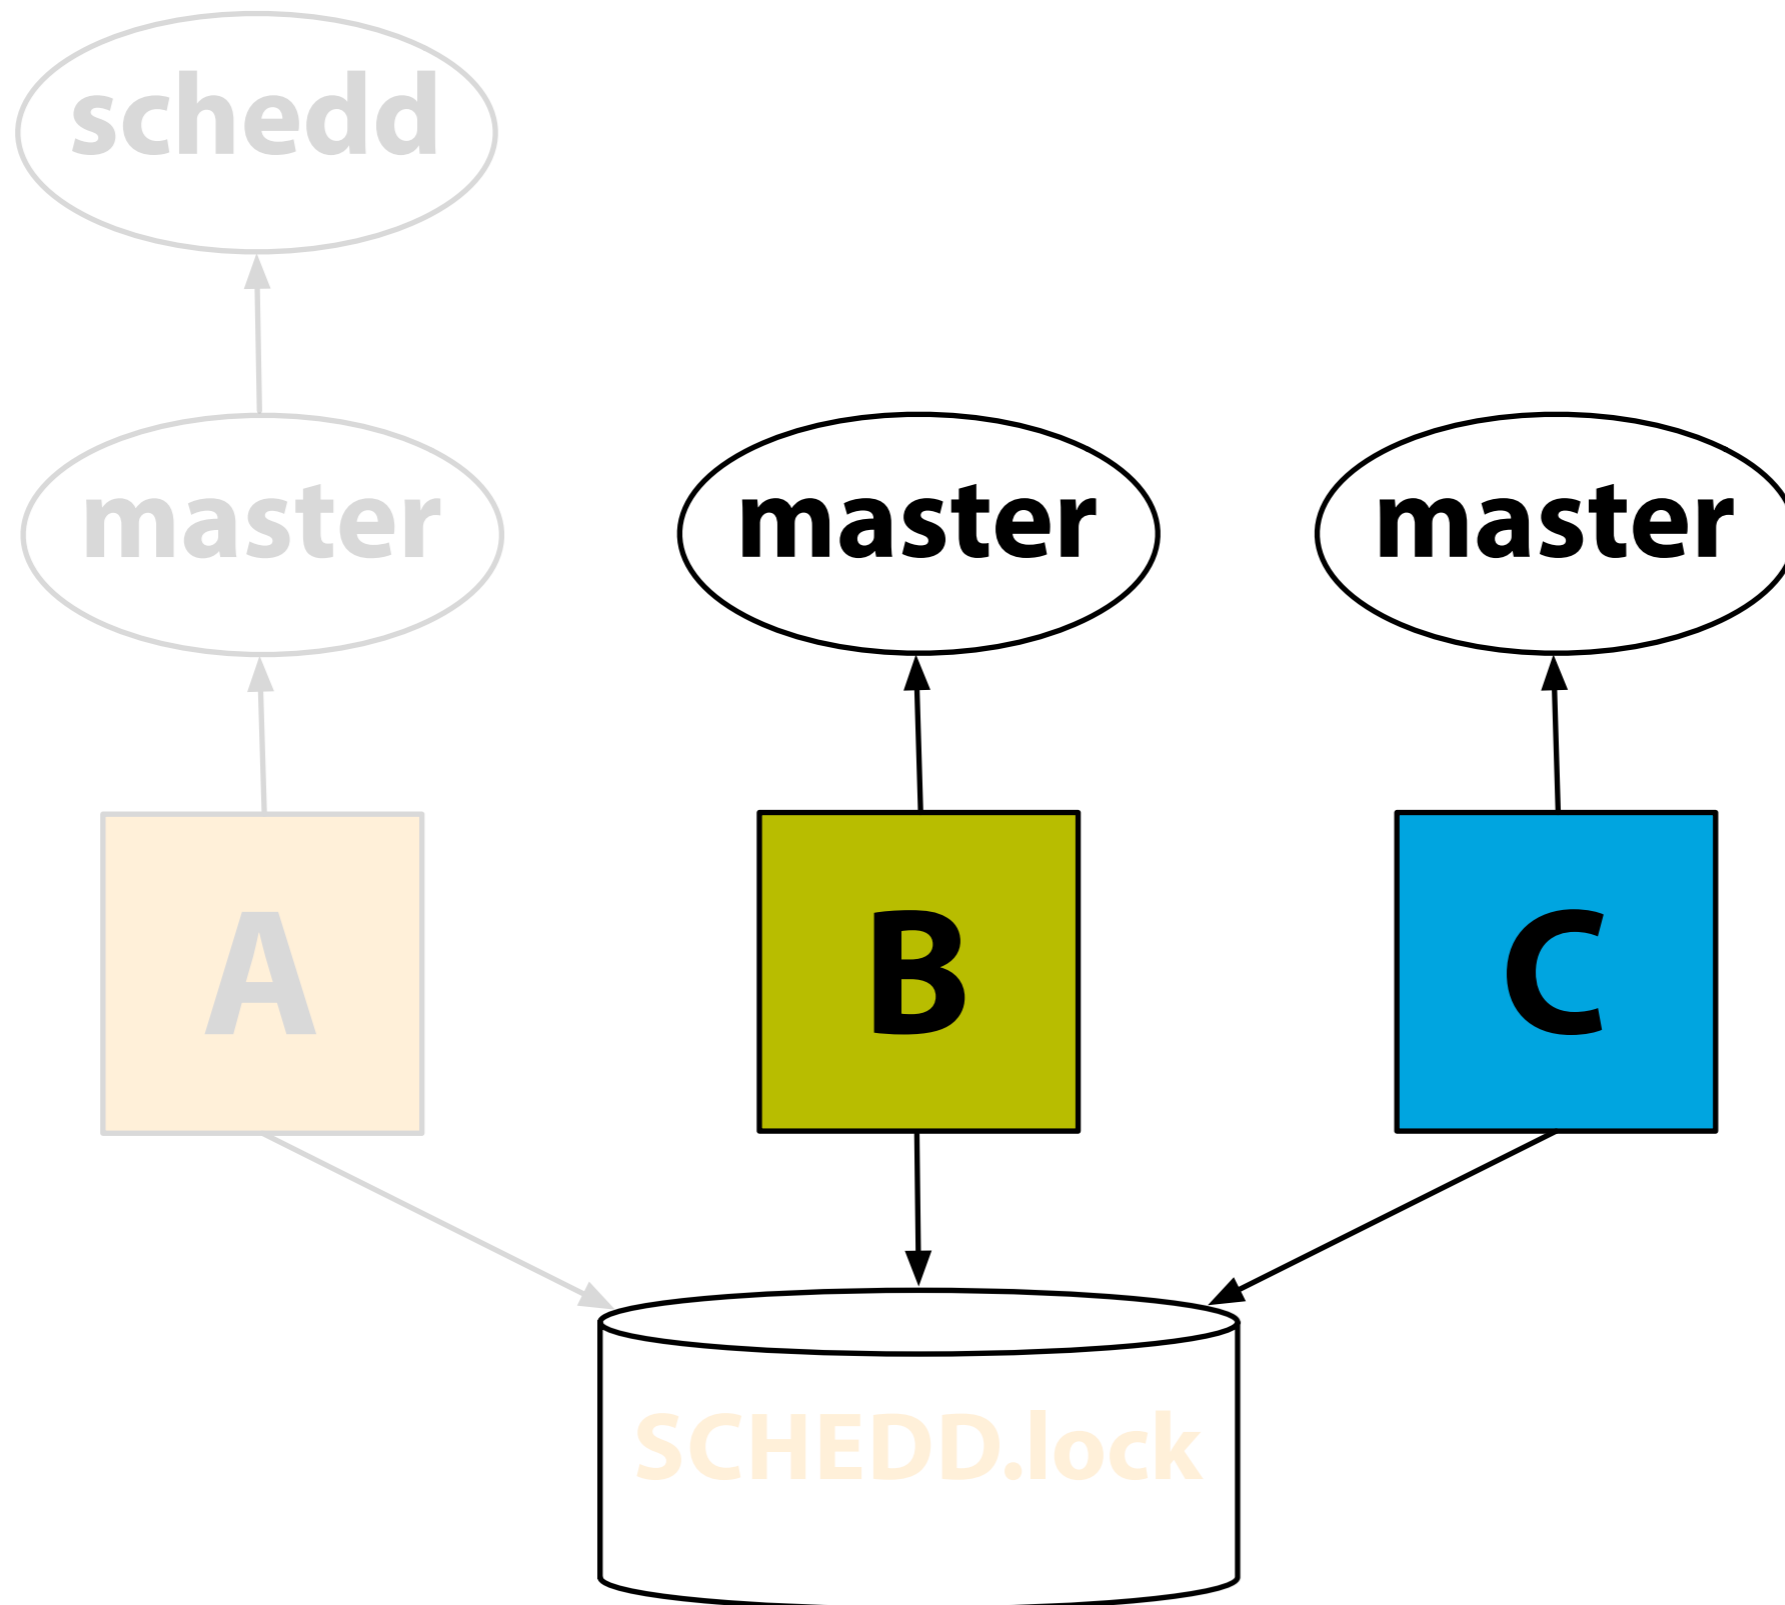

- **Master-based high-availability**
- **High availability via Cluster Suite**
- **Live demo: configuring Cluster Suite**

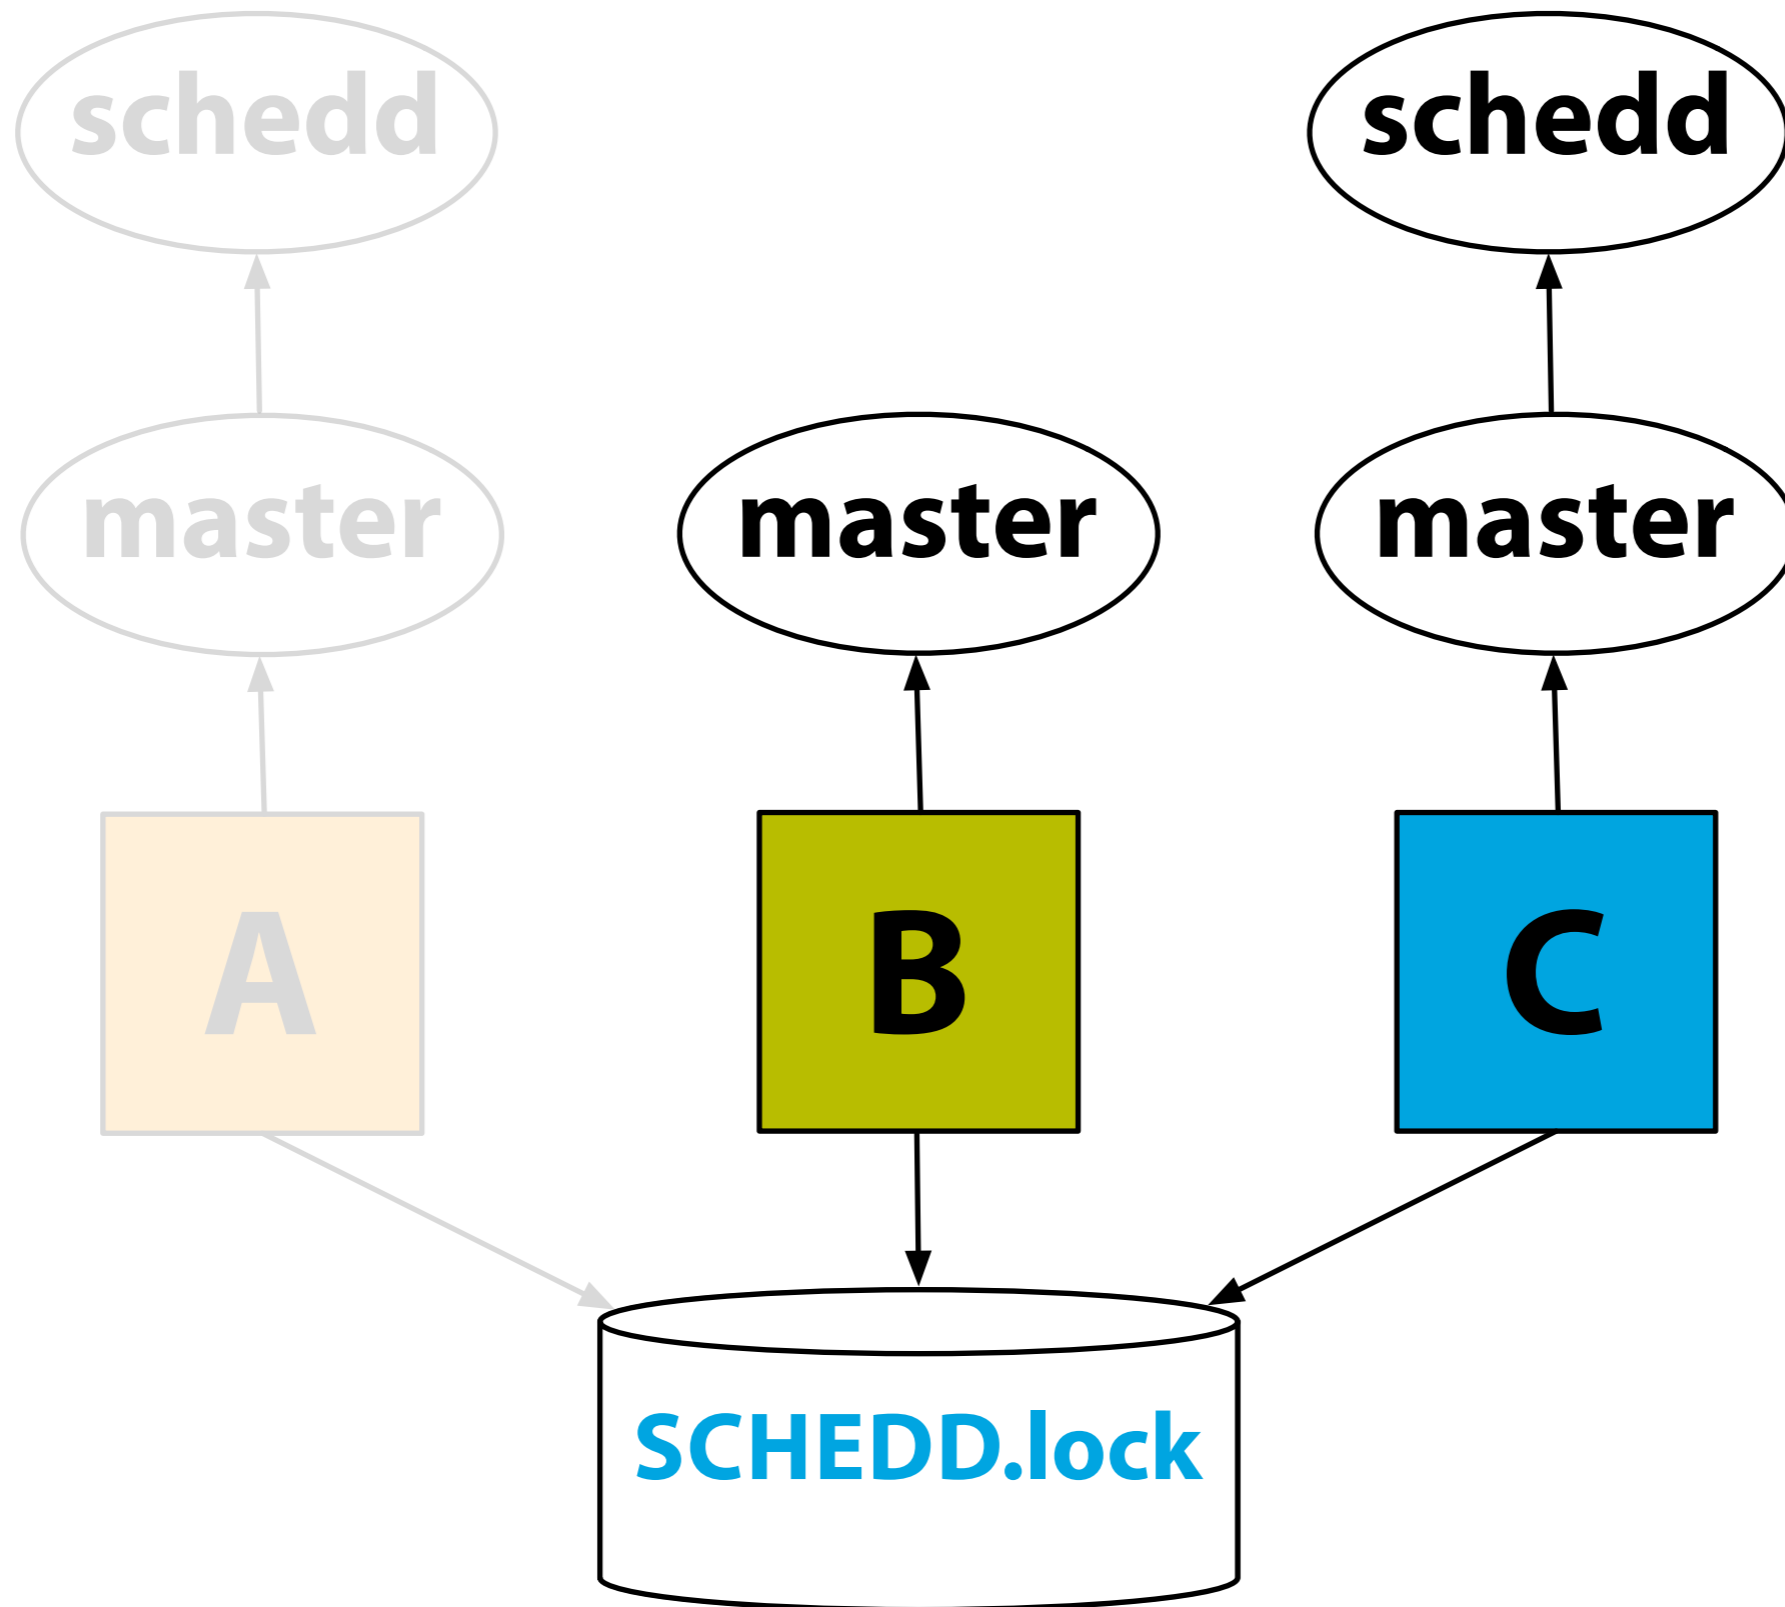

Master-based high-availability

Configuring high-availability

```
# add this to A, B, and C
```

```
MASTER_HA_LIST = SCHEDD
```

```
# must be on a shared FS
```

```
SPOOL = /share/spool
```

```
HA_LOCK_URL = file:/share/spool
```

```
# prevent preen from removing the lockfile
```

```
VALID_SPOOL_FILES = SCHEDD.lock
```

Configuring high-availability

```
$ for host in A B C; do
    wallaby add-features-to-node $host \
        HAScheduler
    wallaby add-params-to-node $host \
        SPOOL=/share/spool
done
$ wallaby activate
```

Master-based HA: advantages

- **Minimal, configurable downtime in the case of schedd node failure**
- **You don't have to install anything**
- **It's easy to configure**

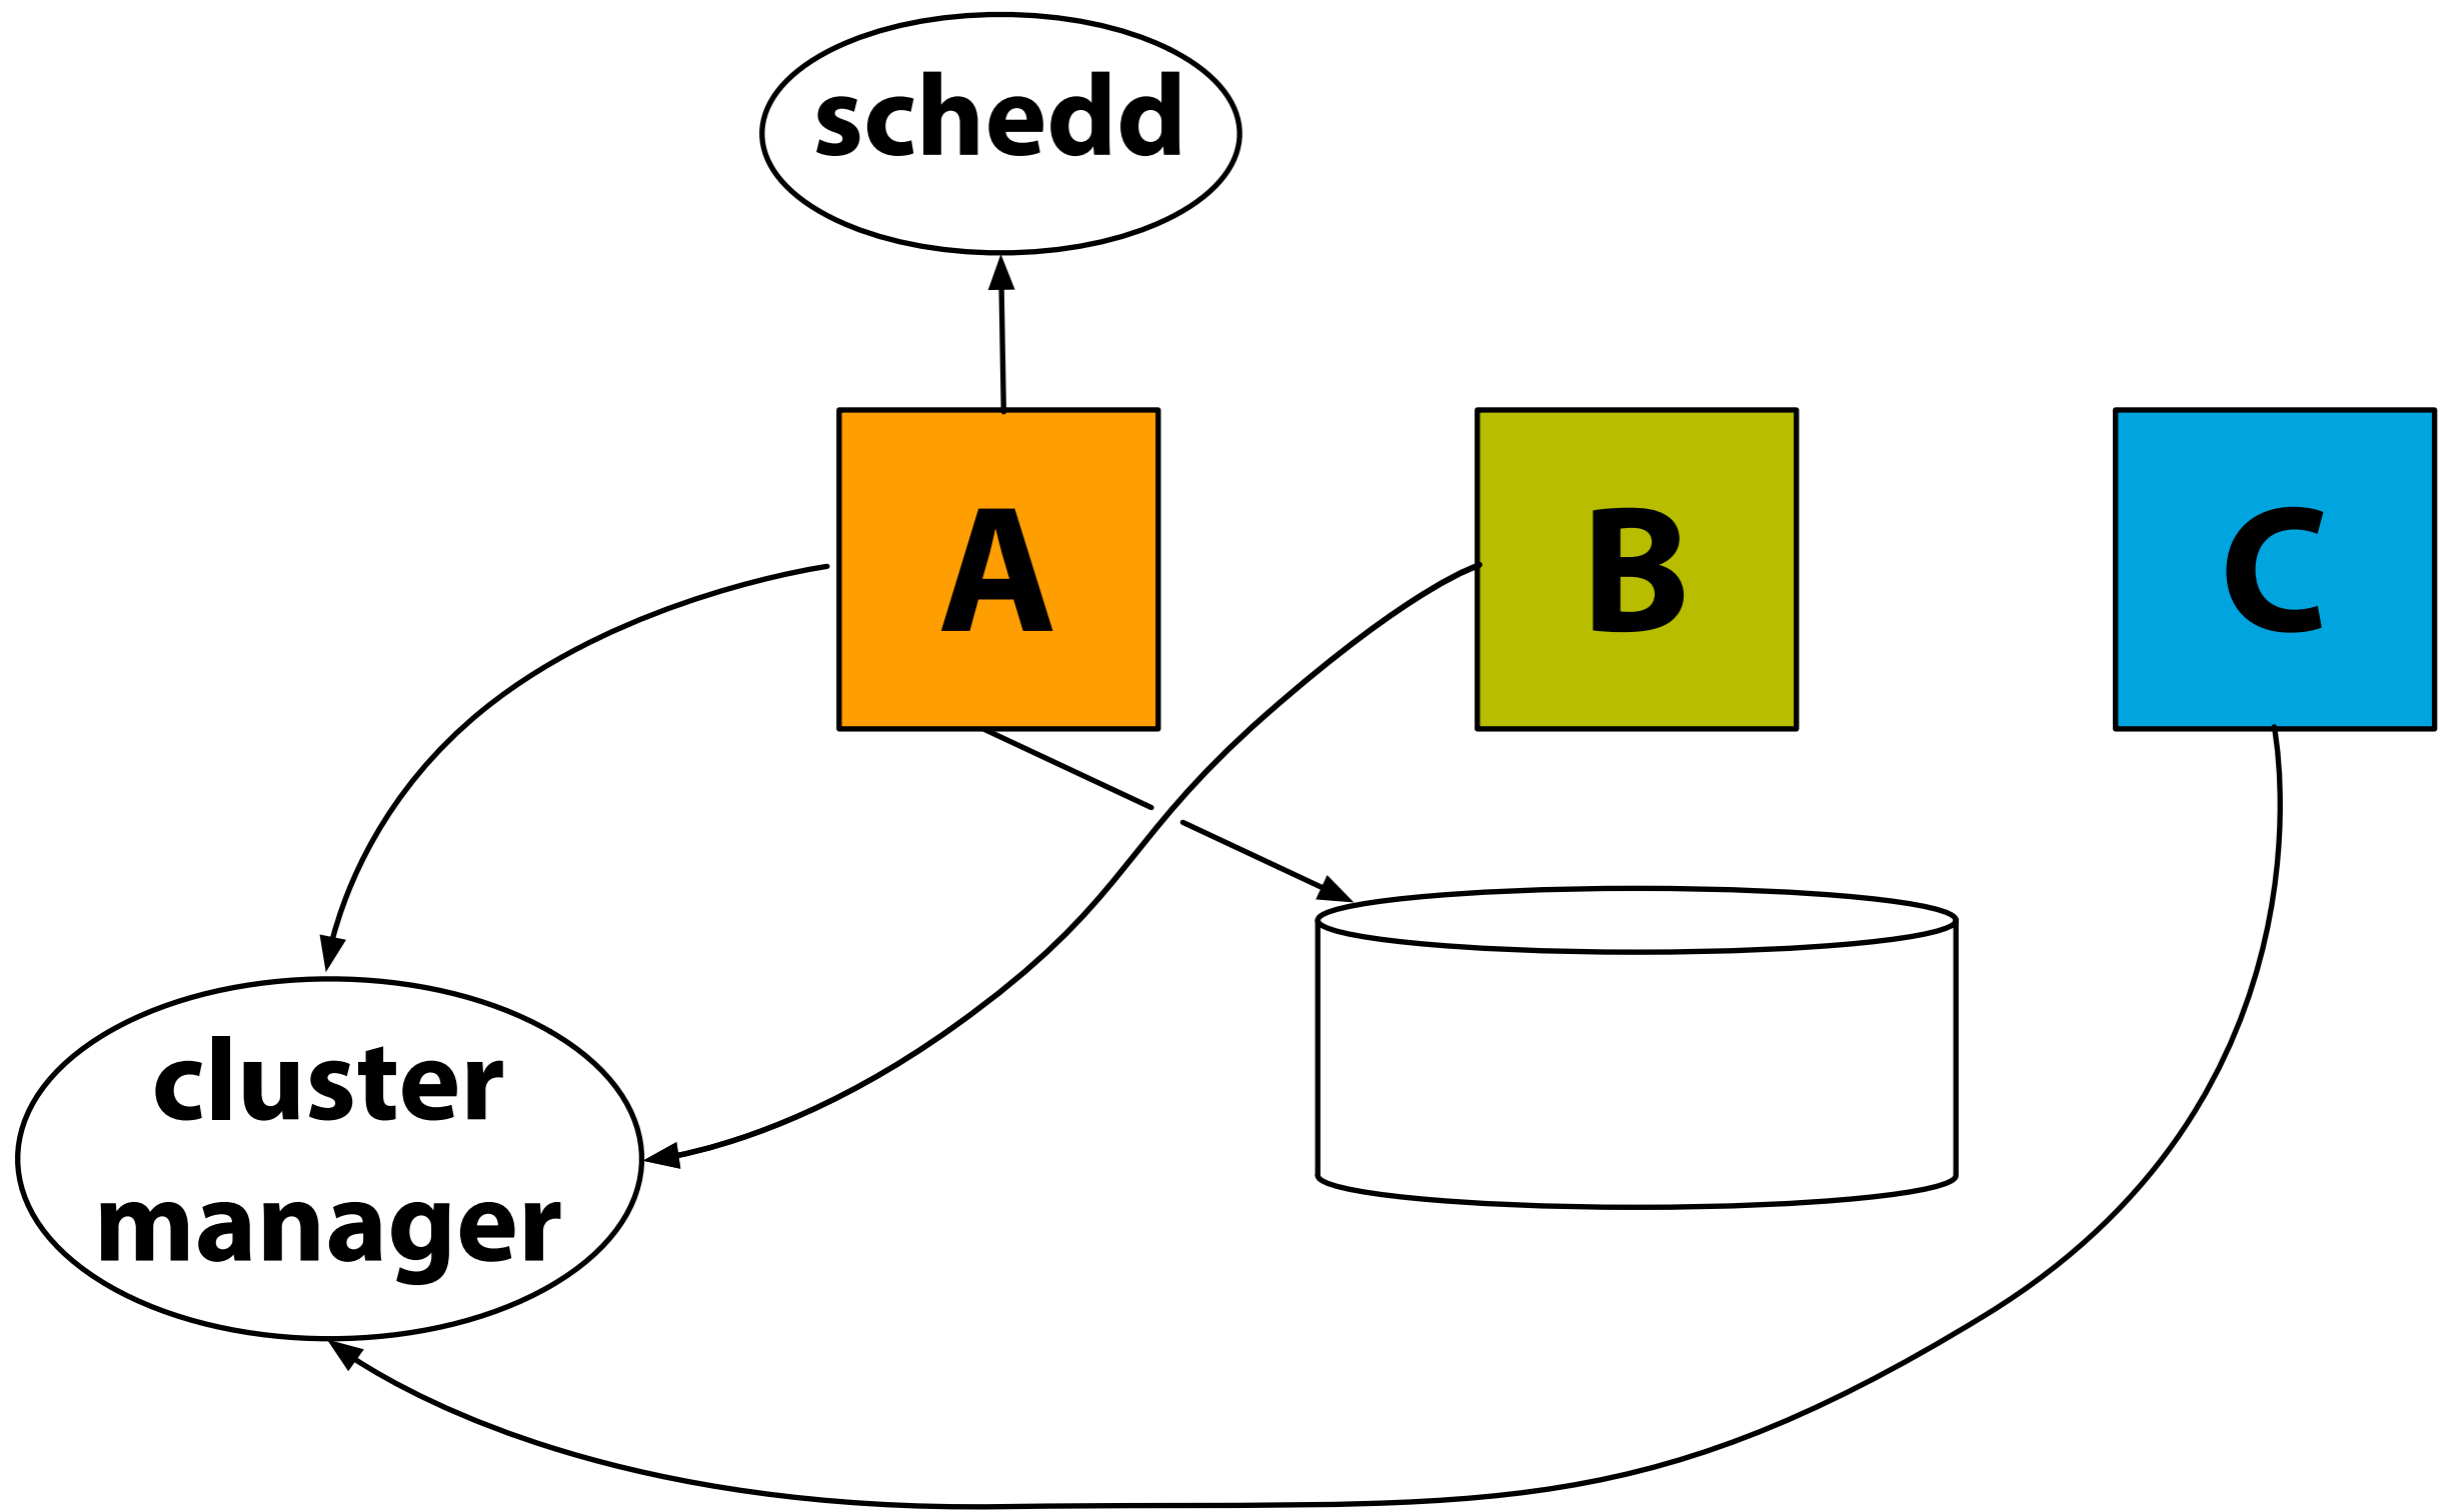

High-availability through Cluster Suite

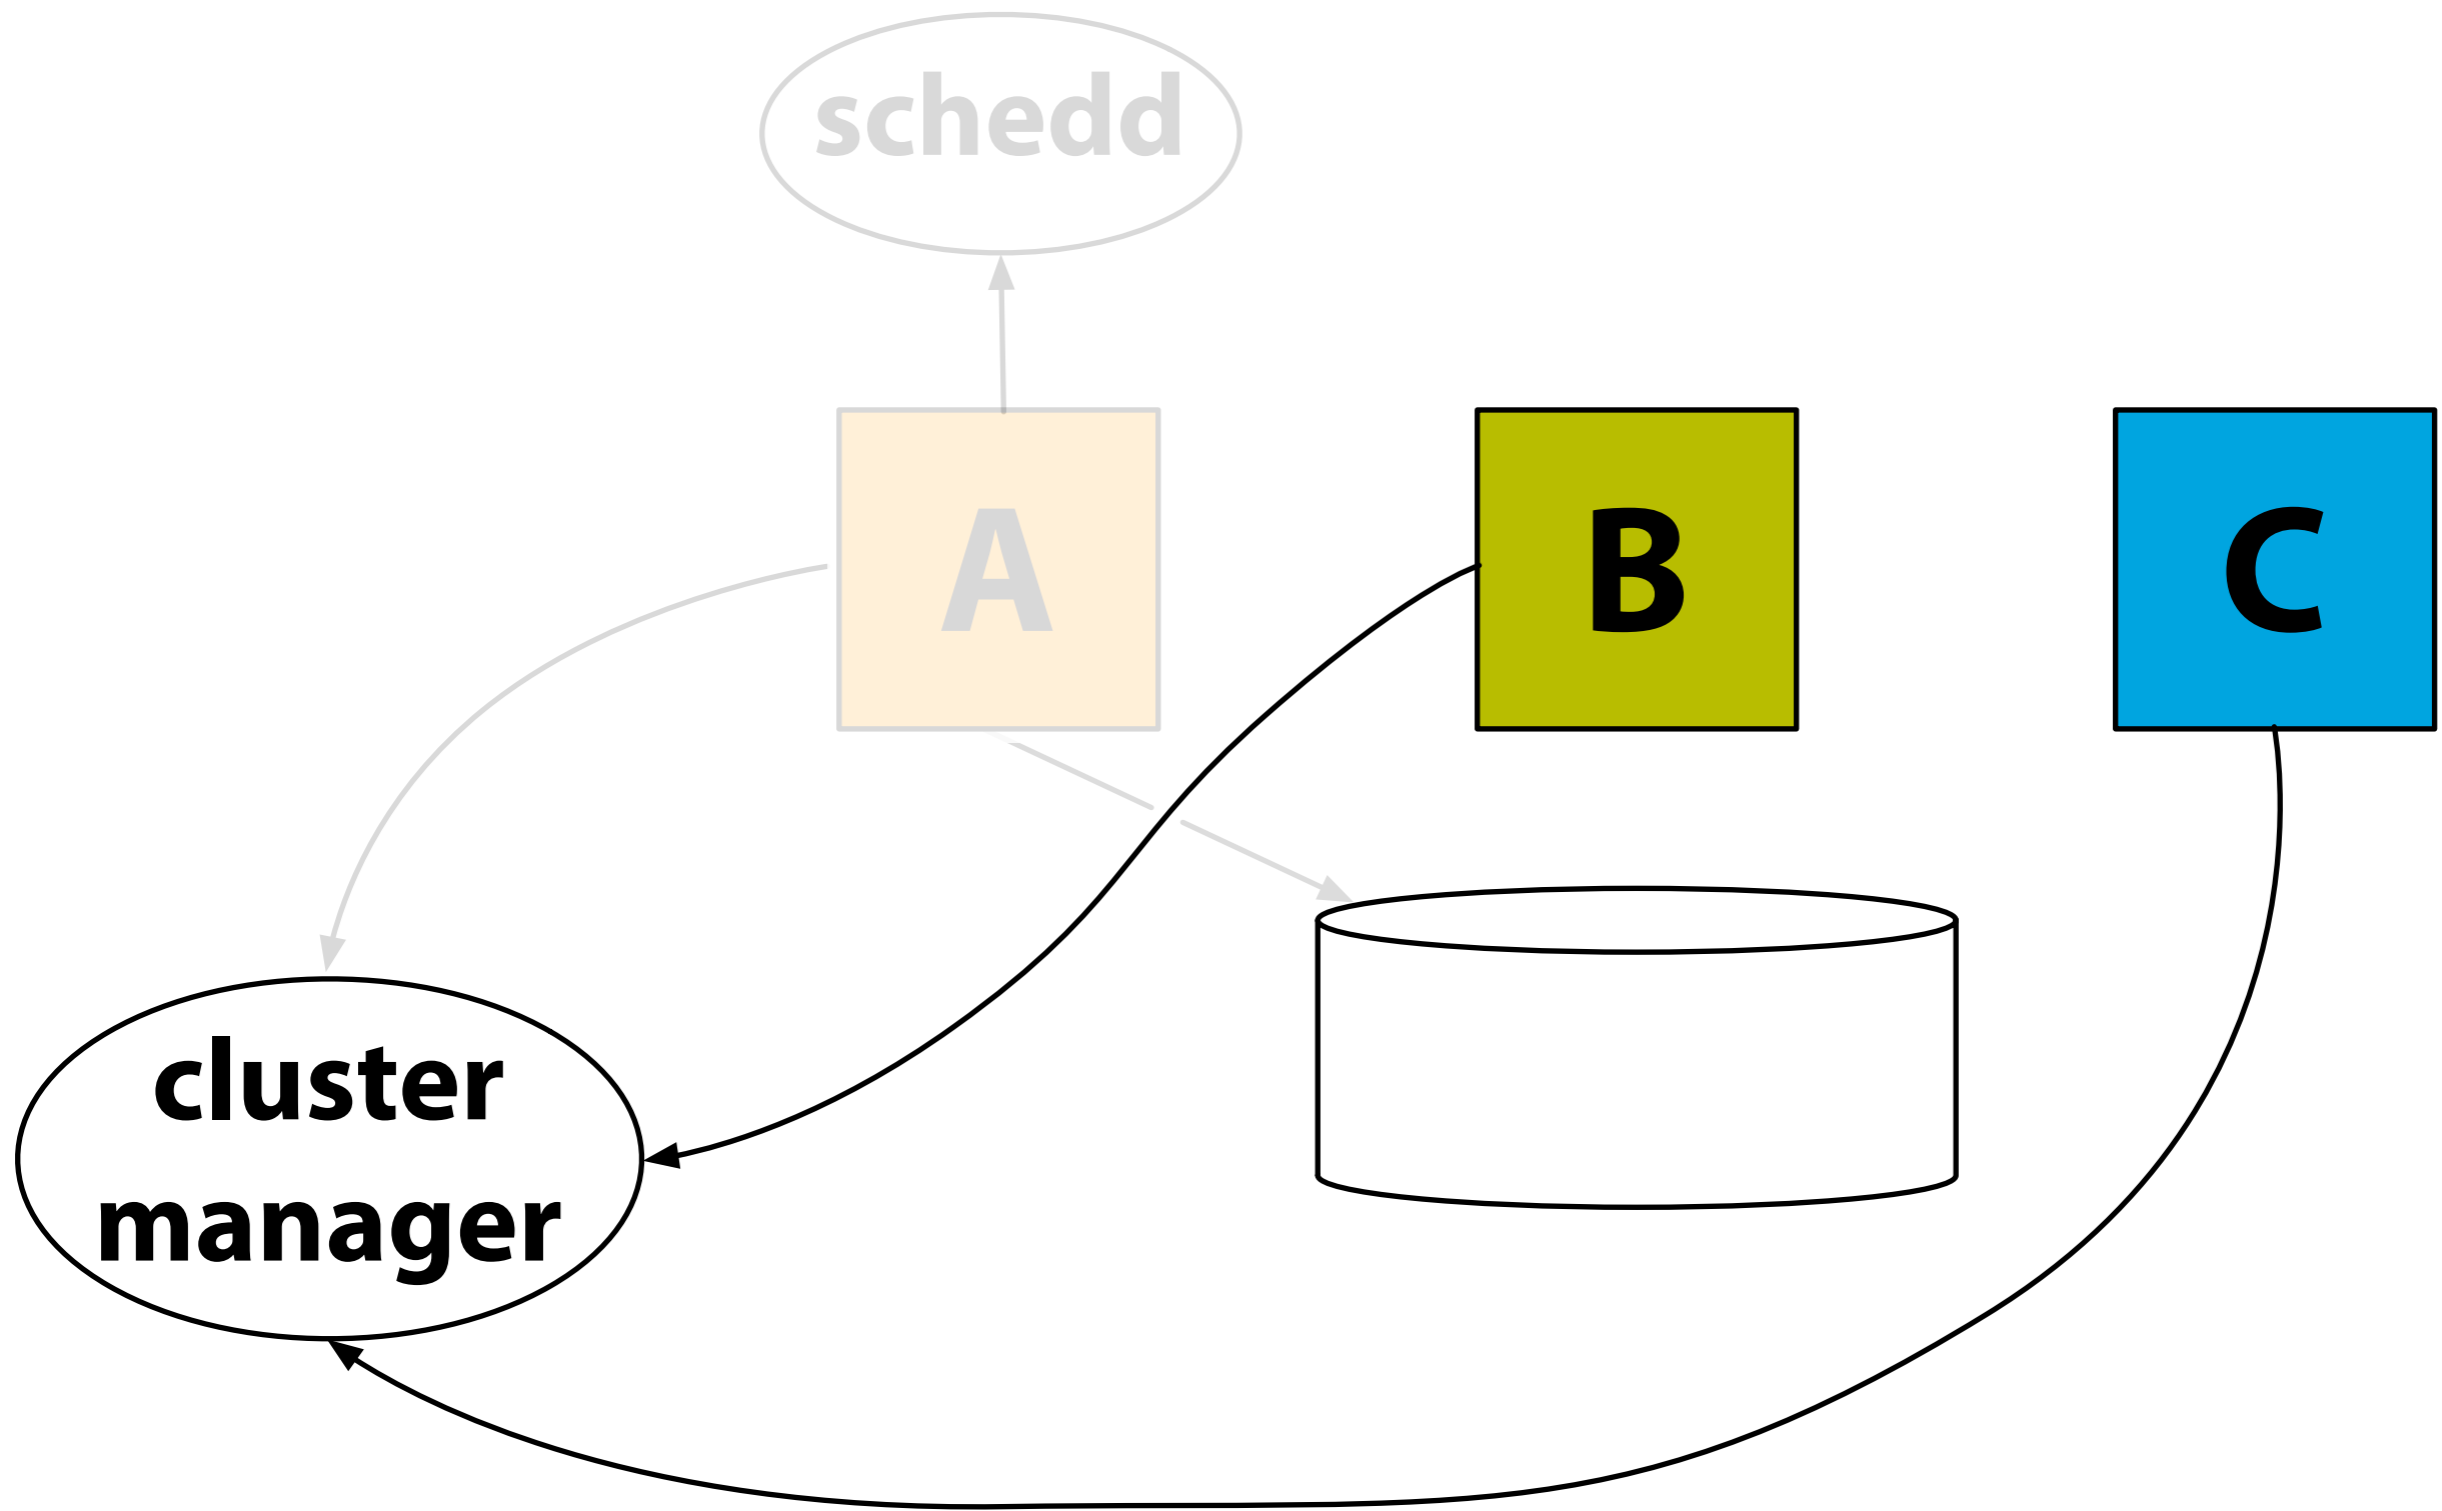

About Cluster Suite

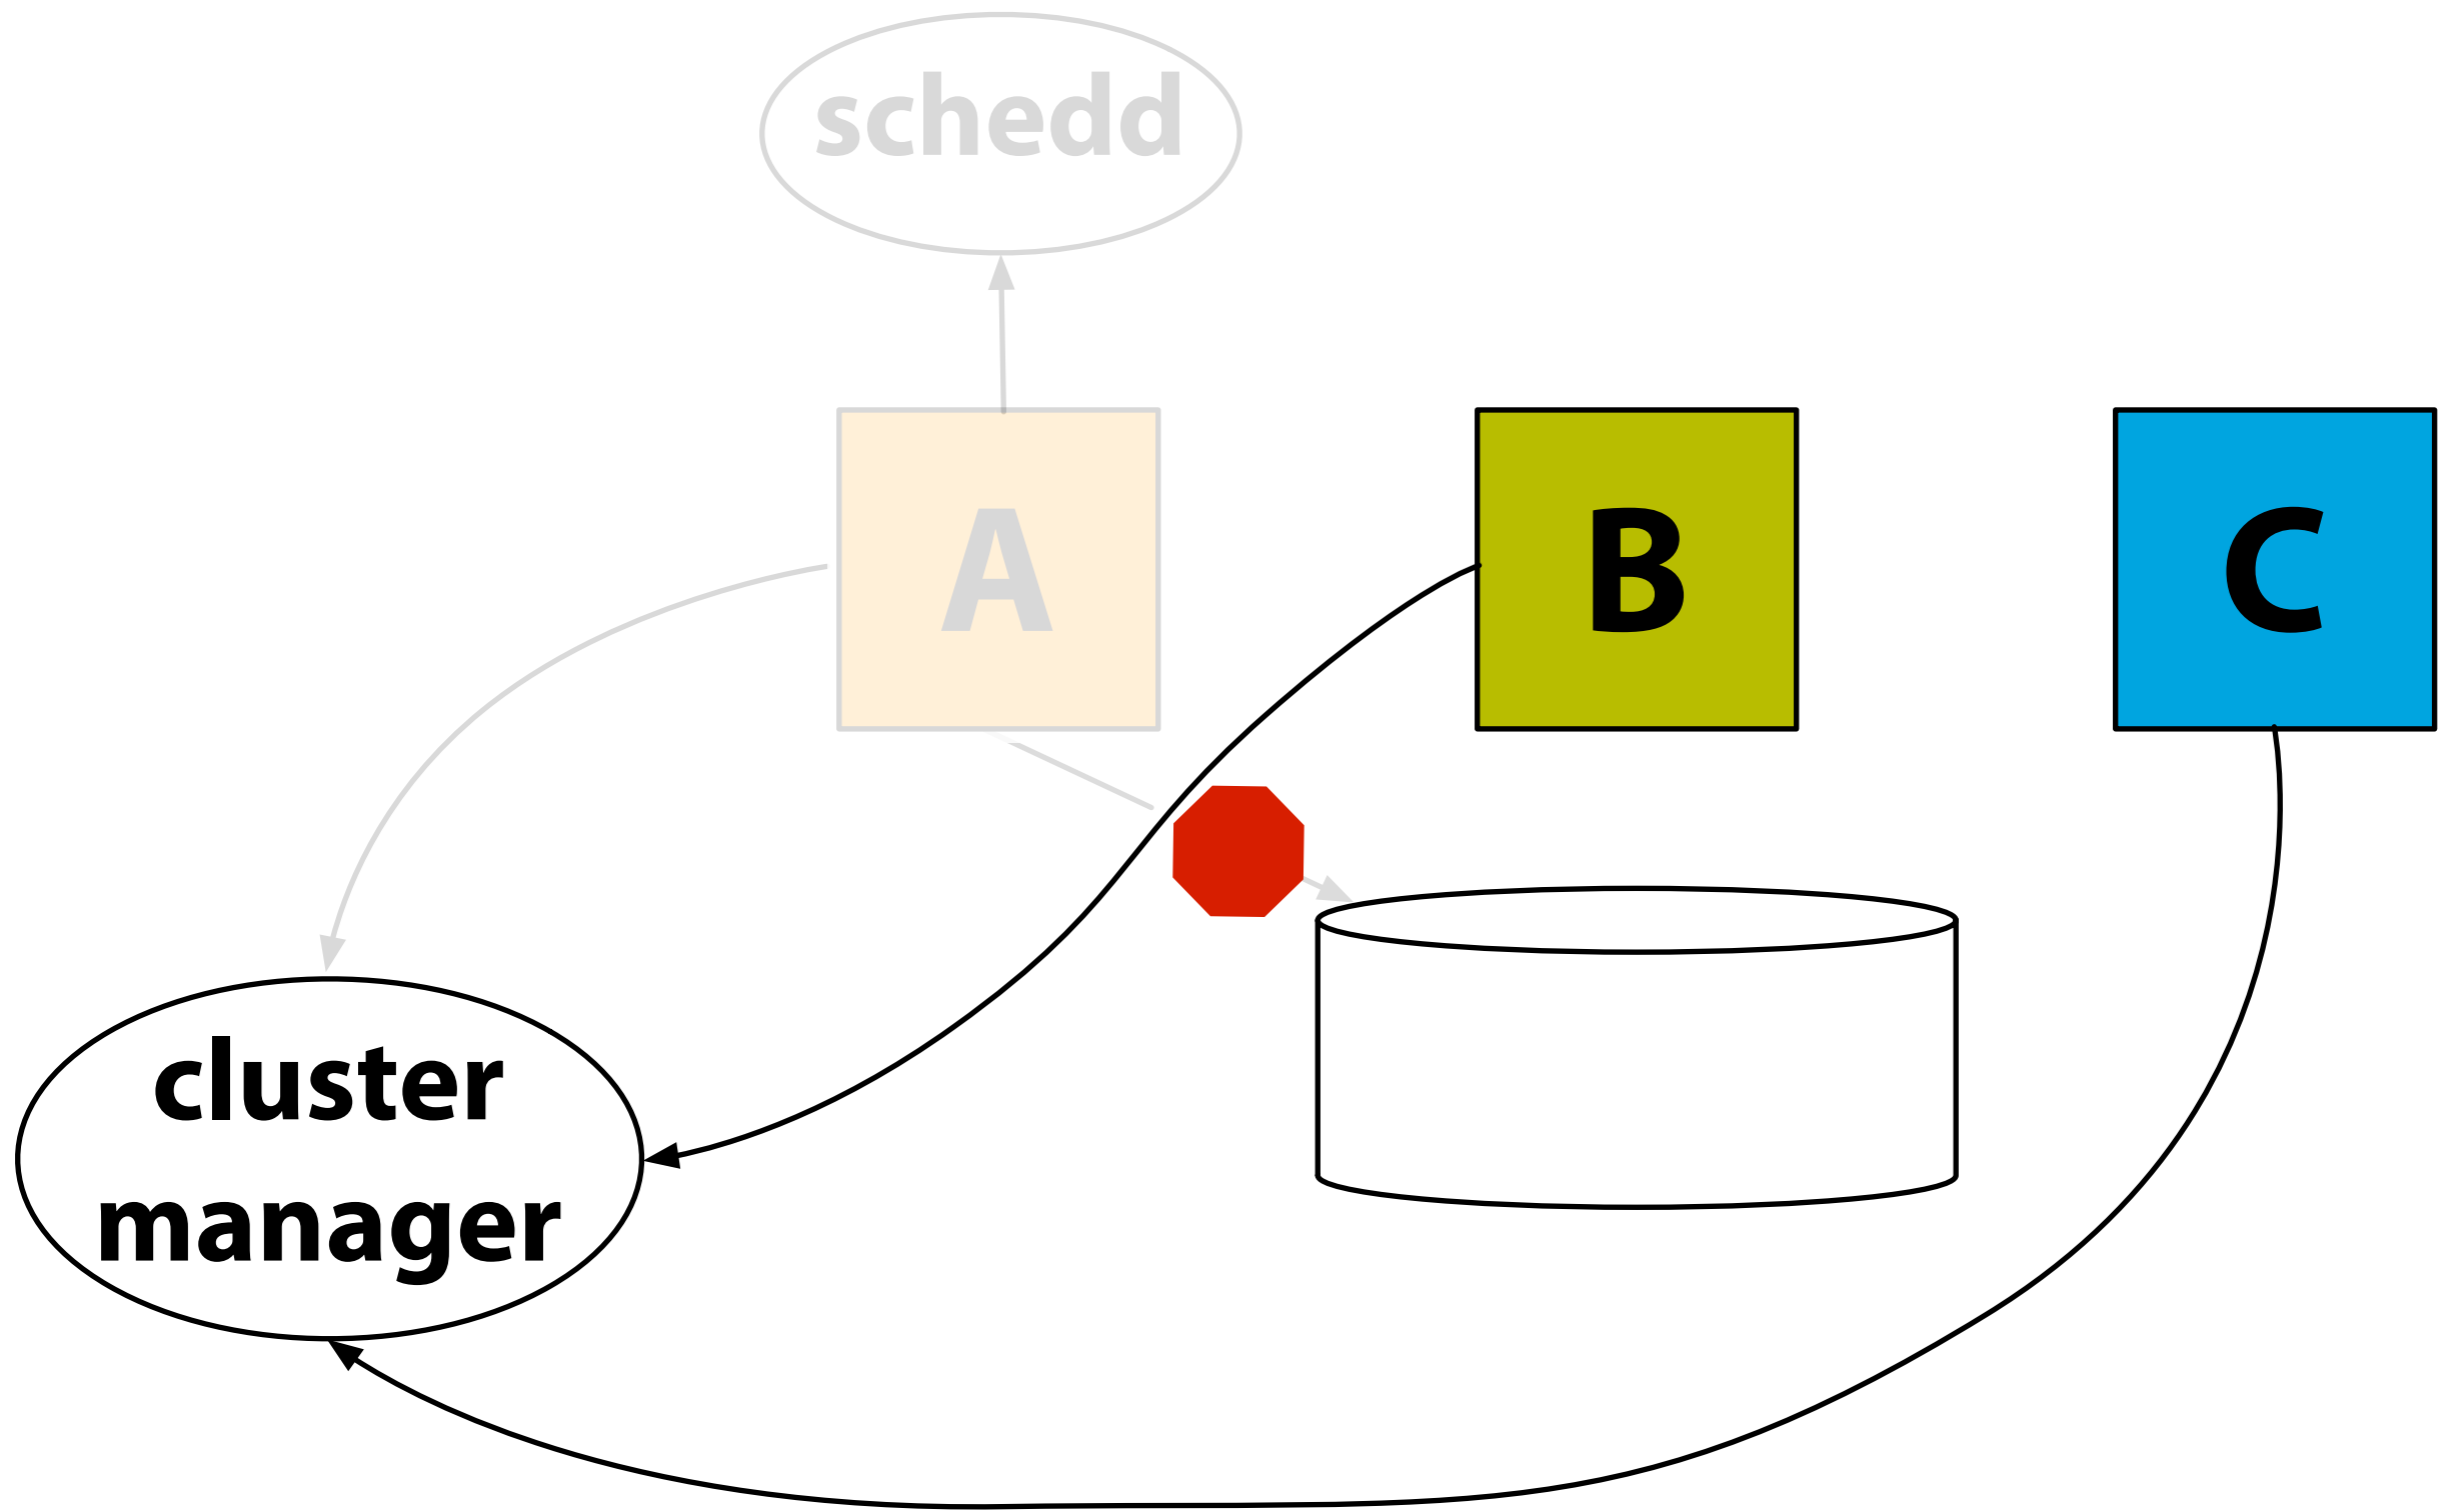

- **High-availability technology, distributed as open source and in Red Hat products**
- **Supports clustering and fencing**
- **Groups services into logical dependence-based hierarchies**

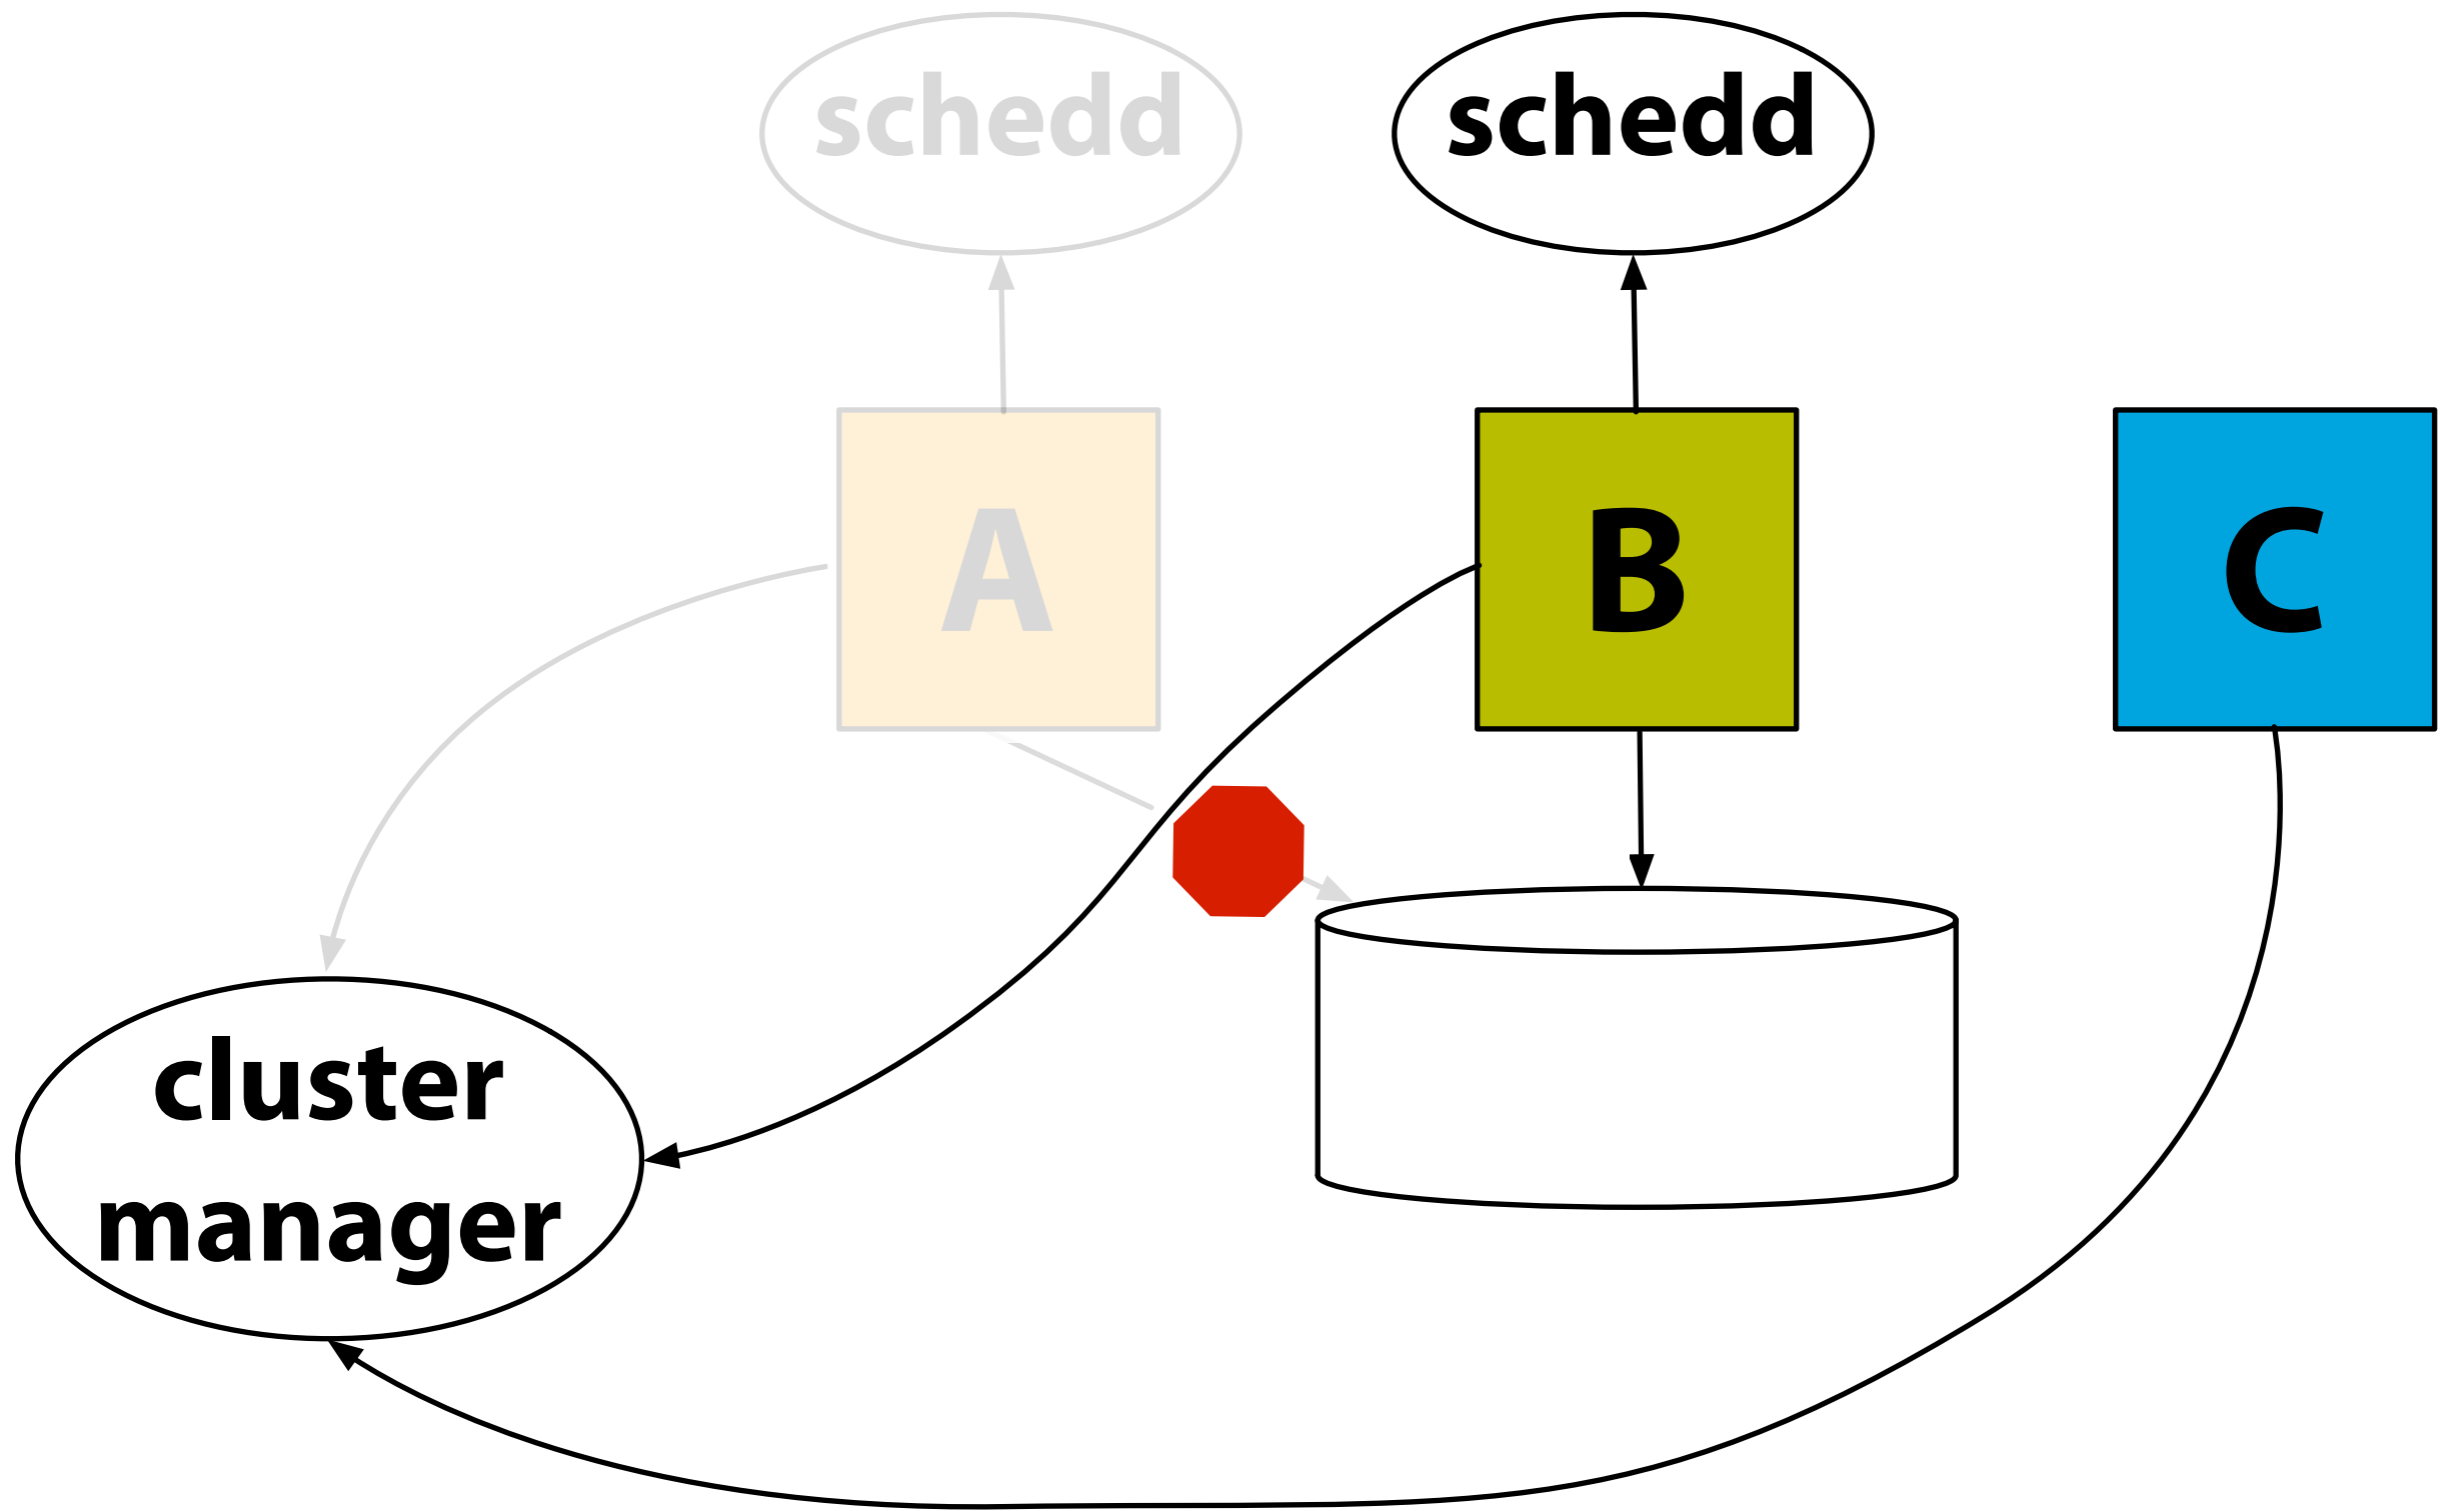

Nodes | Fence Devices | Failover Domains | Resources | **Service Groups** | Configure

[+](#) Add [▶](#) Start [↺](#) Restart [■](#) Disable [✕](#) Delete
